

THE FUTURE OF AI AT WORK

How artificial intelligence is changing the modern workplace.

Business Insight Presentation · 2026 Self-initiated concept project

The Shift

AI is moving from experiment to everyday tool.

Three stages:

- 1 Yesterday**
AI was something businesses experimented with.
- 2 Today**
Teams use AI for everyday tasks.
- 3 Tomorrow**
AI becomes integrated into how work gets done.

Where AI Is Showing Up

AI is already changing the workflow.

Writing

Drafting and editing

Research

Finding and summarizing
information

Analysis

Working with data

Design

Generating and exploring ideas

Automation

Handling repetitive tasks

The Human + AI Model

The future isn't humans vs. AI.

Human judgment + AI capability = better work

Humans bring

- Creativity
- Context
- Judgment
- Empathy

AI brings

- Speed
- Scale
- Pattern recognition
- Automation

What Changes?

AI doesn't just change tasks. It changes workflows.

Show a "Before → After" journey.

BEFORE

Research → Draft → Review → Edit → Deliver

WITH AI

Research + AI → Draft + AI → Human review → Refine → Deliver

📌 The key message: AI shifts people from repetitive execution toward higher-value decisions.

The New Skill Set

As AI gets better, human skills matter differently.

Critical thinking

Evaluate outputs and make decisions.

Communication

Turn ideas into clear messages.

Creativity

Generate original approaches.

AI literacy

Know when and how to use AI effectively.

The Risks

Adoption comes with responsibility.

Four risks:

Accuracy

AI outputs can be wrong.

Privacy

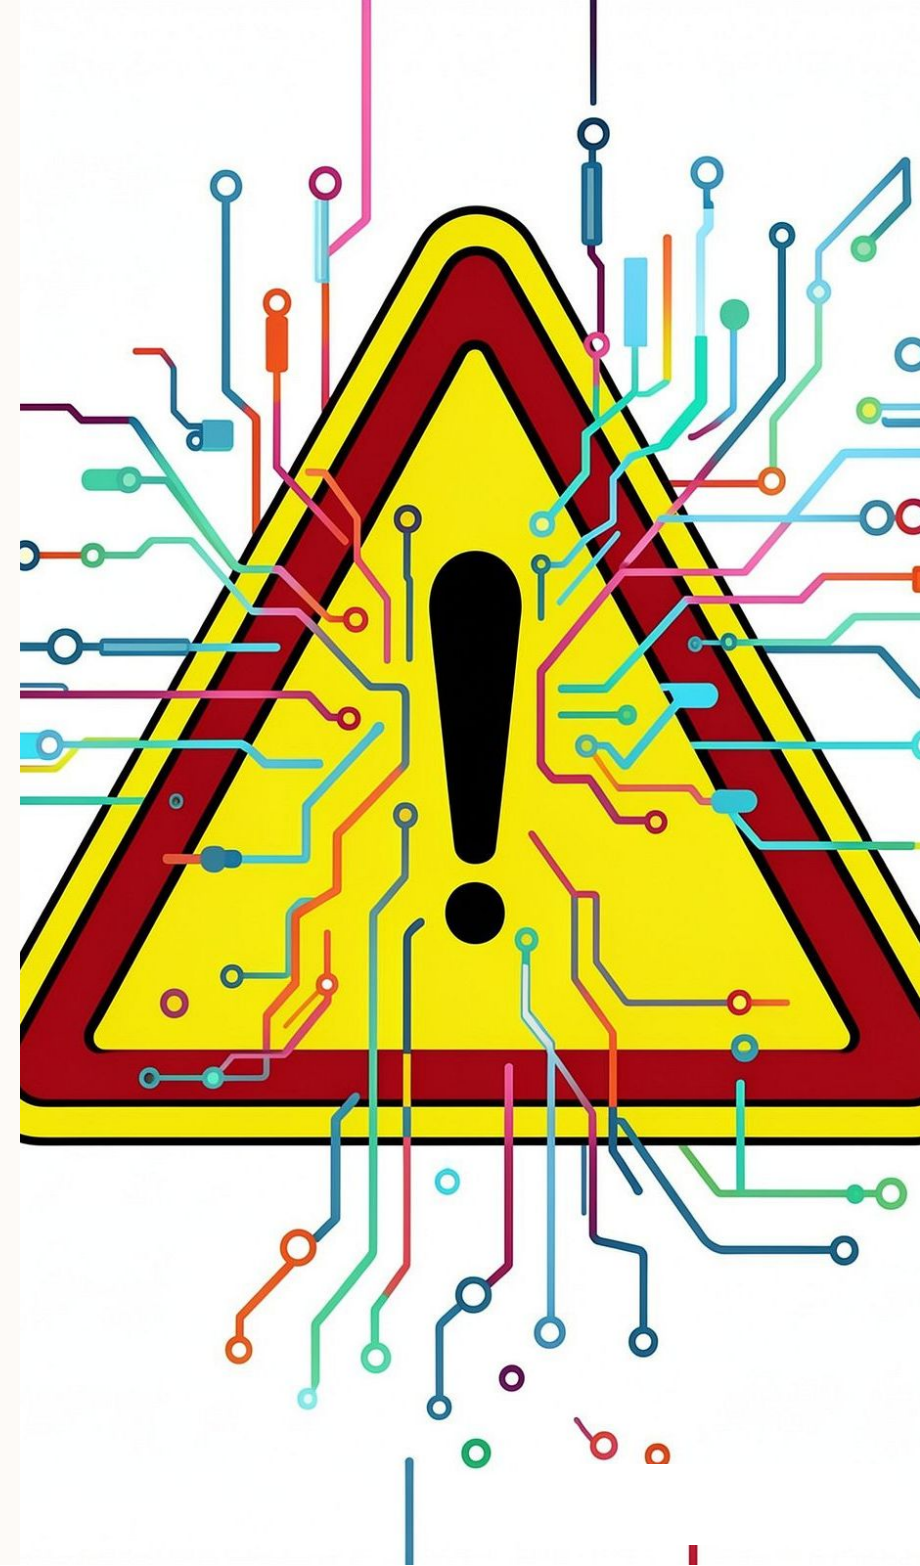

Sensitive information requires careful handling.

Bias

Systems can reproduce biases in their data.

Overreliance

Human judgment shouldn't disappear from the process.

The Opportunity

The biggest opportunity is augmentation.

Don't replace the worker. Amplify the worker.

Then three examples:

Faster research

AI handles the first pass.

Better decisions

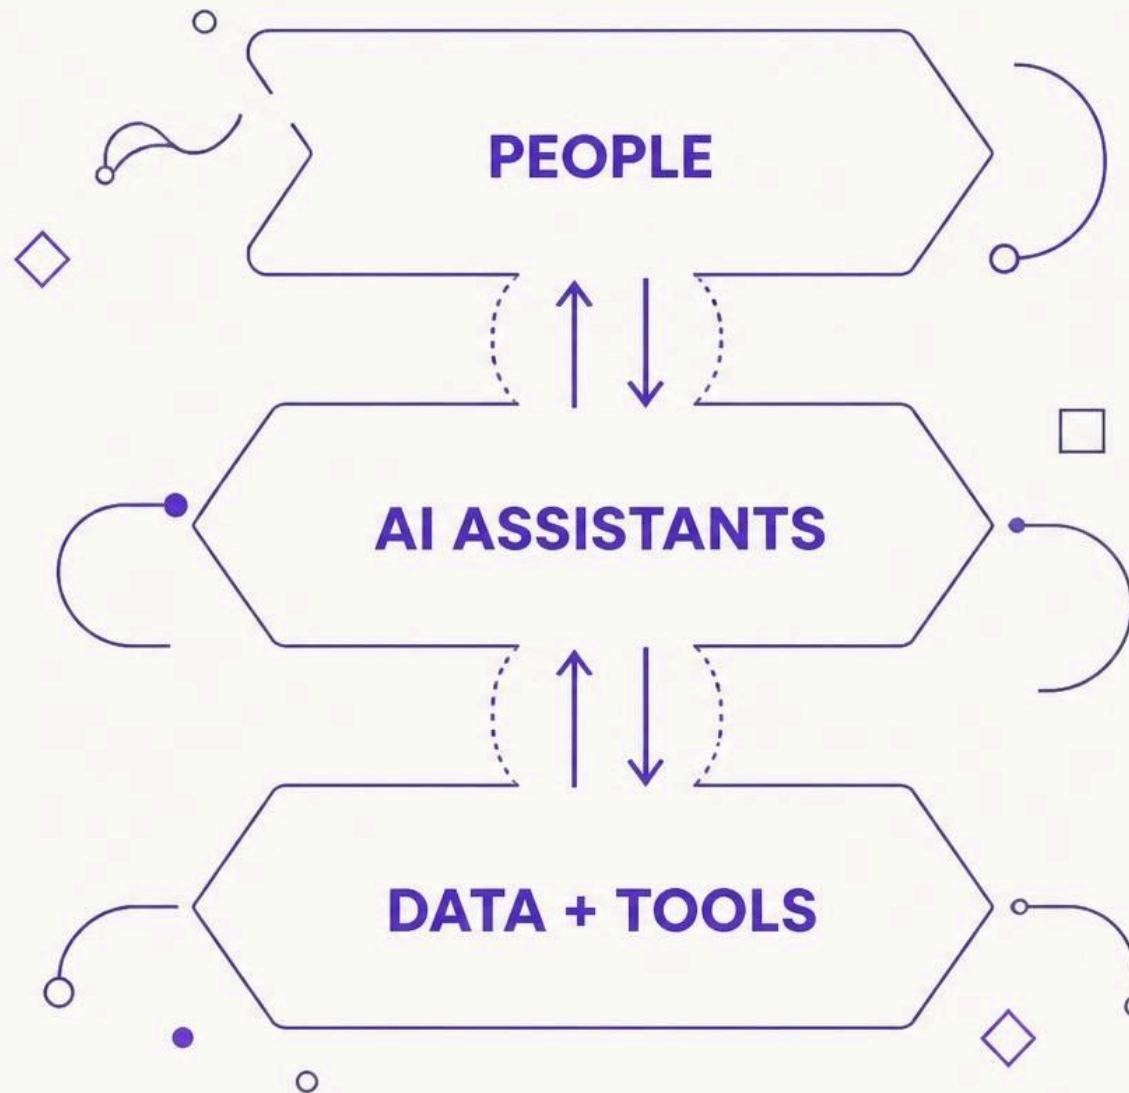

People spend more time interpreting information.

More creative capacity

Less time on repetitive production.

What the Future Workplace Looks Like

The workplace is becoming more collaborative—between people and intelligent tools.

□ The winning organizations won't simply adopt AI. They'll redesign how work gets done.

Closing

The future of work isn't about working more.

It's about working better.

AI is a tool. People are still the decision-makers.
